

Science and Technology Studies (STS)

Science and Technology Studies (STS) is an interdisciplinary field that examines the relationships between science, technology, and society. It explores how scientific knowledge is produced, how technology is developed, and how these processes are shaped by social, cultural, and political factors. STS researchers often study the history of science and technology, the ethics of scientific research, and the impact of technology on society.

One of the key areas of research in STS is the history of science. This involves studying the development of scientific theories and practices over time, and how these have been influenced by social and cultural contexts. For example, the history of medicine has been shaped by changes in social norms and medical technology.

Another important area of research in STS is the ethics of scientific research. This involves examining the moral implications of scientific activities, such as the use of animals in research, the development of nuclear weapons, and the use of genetic engineering. STS researchers often argue that scientific research should be guided by ethical principles that take into account the interests of all affected parties.

Finally, STS researchers also study the impact of technology on society. This involves examining how new technologies, such as the internet, mobile phones, and artificial intelligence, are changing the way we live and work. STS researchers often argue that technology is not just a neutral tool, but a powerful force that shapes social and cultural life.

Honours

Honours in Science and Technology Studies (STS) is a program that provides students with a deep understanding of the relationships between science, technology, and society. The program is designed for students who are interested in the history of science, the ethics of scientific research, and the impact of technology on society.

The program includes a variety of courses that explore the history of science, the ethics of scientific research, and the impact of technology on society. Students will also have the opportunity to participate in research projects and internships.

Students who complete the program will receive a Bachelor of Science degree with Honours in STS. This degree is highly respected and provides students with the skills and knowledge needed to pursue a career in a variety of fields, including science, technology, and public policy.

For more information about the Honours program in STS, please contact the program coordinator at [email address].

Major

The Major in Science and Technology Studies (STS) is a program that provides students with a deep understanding of the relationships between science, technology, and society. The program is designed for students who are interested in the history of science, the ethics of scientific research, and the impact of technology on society.

The program includes a variety of courses that explore the history of science, the ethics of scientific research, and the impact of technology on society. Students will also have the opportunity to participate in research projects and internships.

Students who complete the program will receive a Bachelor of Science degree with a Major in STS. This degree is highly respected and provides students with the skills and knowledge needed to pursue a career in a variety of fields, including science, technology, and public policy.
